1. Street numbering and naming patterns
2. Enumeration: numbering
3. To... "investigate the geographies of mathematization and calculations"
4. The authors use statistics and percentages from certain cities in the US along with some bar graphs that showed the increase/decrease of the numbered and lettered cities from the last 50 years.
5. We agree because his evidence is objective and hard to argue against without concrete evidence of our own.
6. The article pertains to human geography because the topic covered involves how the geographical phenomenon (numbering and lettering) came about culturally in the US.
7. The data tables and the explanation from the authors in the "Results" subheading are what tells us the results from their research project.

These notes are a bit short. I'm looking for more description and explanation.

The relationship between the answer to Q1 and Q3 should be apparent. If the article's subject is street numbering and naming patterns, then the thesis statement should also be

about that topic. See my responses to other groups' posted notes for more on the thesis/research question of this article.
